[8]: ###Idea Question:  
##whats the sentiment analysis of each article (3) between the sources used to  
→describe the chernobyl nuclear disaster  
##finding the cause of the chernobyl nuclear disaster through the word  
→frequency of each article  
##whats the frequency of each word  
  
#More:  
##basically the frequency of each word in comparison to another and see which  
→is most frequent  
#what is the word chernobyl most associated with in each article? (for cause?)  
#will use on a line-by-line basis to see and answer the question,  
  
#import packages  
import numpy as np  
import pandas as pd

websites = ['https://en.wikipedia.org/wiki/Chernobyl_disaster', 'https://
↳world-nuclear.org/information-library/safety-and-security/safety-of-plants/
↳chernobyl-accident', 'https://www.ans.org/ans/en/areas-of-work/
↳chernobyl.html']
webscraper(websites)

#Conclusion:
#out of all of the websites documenting and stating facts about the chernobyl
↳nuclear disaster, the one from
#britannica about the facts and documenting of what was going on during the
↳disaster, who was working there,
#and more about the layout and how the disaster happened was more neutral

#the wikipedia website also documenting some facts about the chernobyl disaster
↳was the same amount of positivity
#but it was less neutral and more negative, as they put it in a storyline
↳format instead of britannica which
#goes paragraph by paragraph just describing different parts, but wikipedia has
↳more documentation through storytelling

#the third website showing the geographical areas of which the disaster was
↳affected on the land was
#surprisingly more negative probably because it was showing the negative
↳effects on areas and specified ones
#required more negative words than just documenting the facts and storytelling
↳each characteristics about the disaster

#from the word frequency in website 1, the chernobyl wikipedia website the
↳notable frequencies that make sense as
#descriptors include "nuclear", "reactor", "retrieved", "original", "power",
↳"radiation", and "april"
#thus, to answer the question of what caused the chernobyl disaster based on
↳the article word frequency of each word,
#we can infer that it was related to the original nuclear reactor, which
↳retrieved too much power and radiation in april
#and was archived at some point perhaps from the public but retrieved and dealt
↳with later on in may to november

#from website 2's word frequency, the britannica website describing the
↳chernobyl nuclear disaster, the initial efforts,
#the history behind the nuclear reactor, and the aftermath and policy
↳implementations such as the chernobyl exclusion zone.
#most frequent descriptors in the article include 'chernobyl', accident,
↳radiation, nuclear, reactor, report, health, fuel,

```

#international, power, ukraine, safety, graphite, plant, and effects. thus,
↳based on the data anlaysis of this article,
#the causes and effects of the chernobyl nuclear disaster involve accidental
↳excessive power and nuclear radiation and fuel from
#the reactor causing health and safety reports and eventually the disaster
↳struck where it affected millions in ukraine, spanning
#a great area and hurting many plants or neighboring power plants with exposure
↳to high levels of graphite in the air (carried by wind)
#(which can cause chest pain and lung disease): this is very similar to website
↳1's conclusion in the fact of what caused the
#original disaster but this website went into more depth onto what the
↳disaster's effects did to the surrounding area and people

#and from website 3's word frequency, the united nations website describing the
↳disaster, mainly focusing on the geographical area
#and the environmental response from the disaster and the release of
↳radioactive nuclides and health effects, particularly how the
#victims dealt with it. most frequent descriptors of this disaster by this
↳article include accident, radiation, unscear, effects,
#report, health, exposure, doses, commitee, exposures, annex, thyroid, cancer,
↳most, affected, areas, general, workers, incidence,
#after, russian, more, exposed, increase, consequences, studies, due, belarus,
↳people, ukraine, 1986, radionuclides, fukushima, than.
#using this and other comparative words frequently listed, we can evaluate that
↳the cause adn more effects of the disaster from
#this may be along the lines of excessive radiation of radionuclides after the
↳disaster and this led to reports on health decline
#and exposure of aftereffects like thyroid cancer and lethal doses, most
↳affected people include general workers at the reactor
#at the area of incidence and countries affected include ukraine, russian,
↳belarus, etc and consequences are still increasing and
#studies are due into why this has happened and is comparable to the fukushima
↳disaster in the city of japan; this disaster was in 1986
